

i want to make an gym management software in india i am right now , can you check on online resources which type of gym software are there in the market and how they provide features in india and general costing for these apps to make , check all of the things then tell me properly

I looked at the current Indian market, recent pricing, and available gym management products. The market has changed significantly over the last 2–3 years. Gym software is no longer just a member database—it has become a complete business operating system.

Indian Gym Software Market Overview

According to recent industry research:

- India has approximately **46,500+ gyms and fitness centers**
- Around **12.3 million active gym members**
- Fitness industry size is approximately **₹16,200 crore**
- Expected to grow at a **double-digit annual rate** over the next several years. 

This is a very good SaaS market because gyms pay monthly subscriptions rather than buying software once.

Main Competitors in India

These are some of the major products currently competing.

Software	Target
Helmr	Small & medium gyms
Fitlyn	Indian gyms
FitGymSoftware	Gyms & chains
UrbanGym	Multi-branch gyms
Organised Gym	Small gyms
GymMaster	International

Software	Target
Wellyx	Premium worldwide
Mindbody	Enterprise
Zenoti	Large fitness chains
OkFit	Budget Indian gyms

Most Indian gyms compare these products before purchasing.  organisedgy... +2

Common Features Every Software Provides

1. Member Management

Every software includes

- Member profile
- Membership history
- Emergency contacts
- Medical notes
- Expiry date
- Membership freeze
- Membership extension

2. Attendance

Usually includes

- QR Code check-in
- Barcode
- RFID Card
- Fingerprint integration
- Face Recognition (few)

Shows

- Today's attendance
- Monthly attendance
- Member visit history

3. Membership Plans

Examples

Monthly

Quarterly

Half Yearly

Annual

Student Plan

Couple Plan

Corporate Plan

Personal Training Plan

Diet Package

4. Billing

Indian software supports

- Cash
- UPI
- Card
- Net Banking

Automatic

- GST Invoice
 - Receipt
 - Payment History
-

5. Due Collection

Very important feature.

Example

Member expires in 5 days

↓

Automatically send

WhatsApp

SMS

Email

Payment Link

Renew Membership

This feature alone saves many gyms a lot of manual follow-up effort. 

6. Lead Management

When someone visits the gym

Store

- Name
- Phone
- Goal
- Source

Pricing in India

Current public pricing generally falls into these bands:

Type	Monthly
Budget	₹500-₹1,000
Standard	₹1,000-₹2,500
Premium	₹2,500-₹5,000
Enterprise	Custom quotation

Many vendors also sell annual plans between **₹6,000 and ₹15,000 per year** for a single gym, while enterprise products may be priced per location or by custom quote. GST and optional WhatsApp messaging charges often apply separately. [ML myntrixlab... +2](#)

Biggest Problems Gym Owners Still Face

After reviewing the market, most software still has common weaknesses.

- ❌ Old UI
 - ❌ Slow mobile apps
 - ❌ Difficult onboarding
 - ❌ Weak analytics
 - ❌ Poor customer support
 - ❌ Too many clicks
 - ❌ No AI
 - ❌ Weak trainer management
 - ❌ Limited nutrition tracking
 - ❌ Limited automation
-

If You Build a New Product in 2026

Instead of copying competitors, build an **AI-first Gym Operating System**.

Include:

AI Receptionist

Customer asks on WhatsApp

"What are your membership plans?"

AI replies automatically.

AI Sales Assistant

Lead enters phone number

↓

AI follows up

↓

Books visit

Sends reminder

Converts to membership

AI Trainer

Generate workout

Diet

Payment Link

Owner notified

Member Mobile App

The member should be able to:

- Check attendance
 - Renew membership
 - View workout
 - View diet
 - Track progress photos
 - Chat with trainer
 - Buy supplements
 - Book classes
 - Pause membership
 - Refer friends
 - Earn loyalty points
-

Estimated Development Cost

If you build it yourself (which is feasible given your MERN/Next.js background), your primary costs are infrastructure and integrations rather than development labor.

Version	Approximate build effort
MVP (single gym)	2-3 months
Professional SaaS	5-8 months
Enterprise platform	10-15 months

Typical infrastructure costs for an early-stage SaaS:

- Domain: **₹1,000-₹2,000/year**
- Cloud hosting: **₹1,000-₹5,000/month** initially
- Database: free tier initially, then usage-based
- WhatsApp Business API: message-based charges
- SMS: usage-based
- Payment gateway: setup plus transaction fees depending on provider

If outsourced to an agency in India, an MVP commonly costs several lakh rupees, while a polished multi-platform SaaS with mobile apps, AI features, and multi-branch support can cost **₹15 lakh to ₹60 lakh+**, depending on scope.

Opportunity Assessment

I believe there is still room for a new entrant if you focus on areas where existing products remain weak:

- Modern UI/UX
- Fast web and mobile experience
- AI automation
- Deep analytics
- Strong WhatsApp integration
- Excellent trainer and nutrition management
- Transparent pricing
- Reliable customer support

Many competitors have mature feature lists, but their user experience and intelligent automation are often behind what modern AI can deliver. That

creates an opportunity to differentiate rather than simply match existing functionality.

Given your experience building business applications with the MERN stack and Next.js, I would recommend building this as a multi-tenant SaaS platform from day one rather than a single-gym application. It is a larger upfront effort, but it scales much better as a subscription business.

I can also design a **complete gym ERP** (around **150-200 features**) with module-wise architecture, database schema, user roles, AI features, mobile app flows, API design, and an implementation roadmap suitable for a commercial SaaS product.

You said

i want to make an gym management software in india i am right now , can you check on online resources which type of gym software are there in the market and how they provide features in india

Show more

I researched the current Indian gym software market, vendor pricing, product positioning, and feature sets. Here's a consolidated market research summary focused on **building a commercial Gym Management SaaS** rather than buying one.

Executive Summary

Market Size

India is one of the fastest-growing fitness markets.

- ~46,000+ gyms and fitness centers
- 12+ million gym members

- Mostly fragmented market (independent gyms)
- SaaS adoption is increasing every year
- Most gyms still use Excel, notebooks, WhatsApp, or basic billing software.

 quantumbyt... +1

This means there is still significant opportunity, particularly for software that improves collections and operations.

Customer Segments

The market naturally divides into four categories:

Customer	Typical Members	Budget
Small gym	50–200	₹500–₹1,500/month
Medium gym	200–700	₹1,500–₹4,000/month
Multi-branch gym	700–3,000	₹4,000–₹10,000/month
Enterprise chains	3,000+	Custom pricing

Common Features Across Competitors

After comparing multiple vendors, almost every serious product includes:

Membership Management

- Member profiles
- Membership plans
- Freeze membership
- Renewals
- Expiry tracking
- Membership history

Billing

- Cash
- UPI
- Card
- Partial payments

- GST invoices
 - Receipts
 - Refunds
-

Attendance

- QR
 - Fingerprint
 - RFID
 - Manual
 - Face recognition (premium)
-

Trainer Management

- Trainer assignment
 - PT sessions
 - Trainer commission
 - Trainer revenue
-

Lead CRM

- Walk-in enquiry
 - Instagram leads
 - Facebook leads
 - Trial booking
 - Follow-ups
 - Conversion tracking
-

Communication

- WhatsApp reminders
 - SMS
 - Email
 - Birthday wishes
 - Renewal reminders
 - Due reminders
-

Reports

- Daily revenue
 - Monthly revenue
 - Membership growth
 - Pending dues
 - Attendance
 - Sales reports
 - GST reports
-

Mobile Apps

Most products now offer:

- Owner app
 - Staff app
 - Member app
-

Features That Differentiate Products

These are where vendors compete.

WhatsApp Automation

Examples:

- Expiry reminder
- Payment reminder
- Birthday message
- Festival offers
- Lead follow-up

This is considered essential for India.  mygymde... +1

GST Compliance

Every India-focused vendor emphasizes:

- GST invoices
 - CGST/SGST/IGST
 - GST exports
 - Tax-ready reports
-

UPI

Support for:

- Razorpay
 - UPI QR
 - Payment links
 - AutoPay (some vendors)
-

Biometric

Integrations commonly include:

- ZKTeco
 - eSSL
 - Fingerprint
 - Face scanners
-

Multi-Branch

Owners can monitor:

- Revenue
- Staff
- Attendance
- Memberships

Across all branches.

Inventory

Many products now include:

- Supplements
 - Protein
 - Merchandise
 - POS
 - Stock
 - Vendor management
-

Workout & Diet

Increasingly common:

- Workout assignment
- Diet plans
- Trainer notes
- Progress photos

Pricing Trends

Current public pricing generally looks like this:

Category	Typical Price
Budget	₹299–₹999/month
Standard	₹999–₹2,500/month
Premium	₹2,500–₹5,000/month
Enterprise	Custom

Some products price annually (roughly ₹6,000–₹15,000/year), while enterprise platforms quote per branch or by custom proposal. Hidden costs often include WhatsApp usage, onboarding, migration, and GST. [ML myntrixlab... +2](#)

What Gym Owners Actually Care About

Across vendor messaging, the recurring business problems are:

1. Recovering renewals

The biggest source of lost revenue is members who forget to renew.

2. Pending dues

Owners want to know:

Who hasn't paid?

3. Attendance

Questions include:

- Who visited today?
 - Who stopped coming?
 - Which members are inactive?
-

4. Lead conversion

Track:

Walk-in

↓

Trial

↓

Membership

↓

Renewal

5. Staff monitoring

Owners want visibility into:

- Trainer performance
 - Reception performance
 - PT sales
 - Commissions
-

Gaps in the Current Market

Despite many products, several shortcomings appear repeatedly:

Outdated UI

Many dashboards resemble older ERP software.

Weak Analytics

Most report what happened.

Few explain **why** or suggest **what to do next**.

Limited AI

Most AI features are limited to:

- AI workout plans
- AI diet plans

Very few provide AI-driven business intelligence.

Poor Member Experience

Many member apps are basic.

Minimal Automation

Most still require manual intervention.

Weak CRM

Lead tracking often lacks a proper sales pipeline.

Limited Financial Insights

Few products forecast revenue or highlight business risks.

Opportunity for a New Product

A strong differentiator would be an **AI-powered Gym Operating System** with:

- AI sales assistant
- AI receptionist (WhatsApp)
- AI trainer
- AI nutrition planner
- AI business insights

- AI retention predictions
- AI follow-up automation
- AI member engagement

These capabilities remain uncommon in current Indian offerings.

 - Sales forecast
 - Smart reminders
 - Automated follow-ups
-

Estimated Development Cost

Assuming you're building the software yourself (using a stack like Next.js, React Native, Node.js, PostgreSQL/Supabase, etc.):

Version	Time
MVP	2-3 months
Production SaaS	6-8 months
Enterprise-ready	10-15 months

If outsourced in India:

Scope	Typical Cost
Basic	₹3-₹5 lakh
Professional	₹8-₹15 lakh
Enterprise	₹20-₹50 lakh+

Strategic Recommendation

Rather than creating "another gym software," position it as a **Gym Business Operating System**.

The strongest competitive positioning would be:

- **Modern UI/UX** (better than legacy ERP-style products)
- **AI-first workflows** (not just AI workout generation)
- **India-first features** (GST, UPI, WhatsApp, biometrics)
- **Deep business analytics**
- **Excellent mobile experience**
- **Transparent pricing**
- **Multi-tenant SaaS architecture** from day one

That combination addresses the gaps that remain even among the strongest current competitors and gives you a clearer differentiation than competing solely on price.
